Vestas receives order for 77 MW for Spain

Vestas has received an order for a total of 24 units of the V90-2.0 MW turbine and 16 units of the V90-1.8 MW turbine for three projects in Spain. The contract comprises supply, installation, a VestasOnline® Business SCADA solution, as well as a five-year service agreement. The first turbines are expected to be installed by the end of 2009.

The order has been placed by Eufér, which is a joint venture between the Italian Enel Green Power and the Spanish Union Fenosa. As of 1 January 2009, Eufér was the fifth largest wind energy company in Spain with a market share of 3.7 per cent of cumulative wind power.

"We are very pleased with this order from Eufér, which is the result of a close cooperation between our two companies. Eufér is one of the key players in Spain, and one of the fastest growing companies in the local market in terms of installed capacity" says Juan Araluce, President of Vestas Mediterranean. "This contract shows Eufér's confidence in Vestas' technology and in our products, and we are glad to continue working with them," concludes Juan Araluce.

The total annual production of the power plants will amount to 138 GWh. The projects will cover the yearly electricity needs of almost 30,000 Spanish households and will save the environment from more than 54,000 tons of CO₂ emissions per year.

The above order does not affect Vestas' expectations for 2009, cf. company announcement No. 18/2009 of 18 August 2009.

Yours sincerely
Vestas Wind Systems A/S

Ditlev Engel
President and CEO
