Local press release No. 4/2006

Vestas receives its first order for V52-850 kW turbines in Spain

The Vestas Group has received its first order for V52-850 kW wind turbines in Spain. The customer is the utility Enel Unión Fenosa Renovables S.A., which is one of Spain's largest renewable energy promoters and a long time customer of Vestas.

The wind power plant consists of 20 units of the V52-850 kW turbine and will have a total installed capacity of 17 MW. The wind power plant called Codesas 1 will be located in the region of Galicia in the north-west of Spain.

The order comprises supply and commissioning of the turbines as well as a VestasOnline™ remote monitoring system. The scope also includes service and maintenance during the first five years of operation. Delivery of the turbines will begin in November 2006, and commissioning is scheduled to take place in the spring of 2007.

"Vestas has installed more than 1,600 units of the V52-850 kW turbine all over the world. It is one of the most adaptable wind turbines in our product range, and this order shows the competitiveness of Vestas and of this well-proven turbine on the Spanish market," says Ebbe Funk, President of Vestas Mediterranean A/S.
