### Vestas receives an order for V90-3.0 MW turbines in the Netherlands

Vestas Benelux has received an order for delivery of 21 units of the V90-3.0 MW turbine. The order has been awarded by the Dutch consortium Growind, consisting of 21 private investors. The contract includes delivery, installation, commissioning, Vestas Turbine Watch™ - Condition Monitoring, the VestasOnline™ Business SCADA system as well as a service agreement for 10 years.

The project will be located near the port of Eemshaven in the very northern part of the province of Groningen in the Netherlands. With a total installed capacity of 63 MW, the wind power plant Eemshaven Growind will be the largest onshore wind power plant built in one go in the Netherlands.

Delivery of the turbines will start at the end 2007, and the wind power plant will be completed during the second quarter of 2008. The wind power plant is estimated to produce 190,000 MWh per year, which will satisfy the annual energy needs of more than 55,000 Dutch households, and save the environment from more than 103,000 tons of CO<sub>2</sub> a year compared with average EU electricity.

Mr Henk Hutting, CEO of Growind, stated that Vestas was the clear winner of the tender because of the price/performance ratio and the total package of track record and guarantees, which made it feasible to arrange project finance. Also through his personal long time experience with Vestas, Mr Hutting could easily convince the co-investors and the banks that Vestas was the best choice.

*“The V90-3.0 MW turbine delivers more power from a smaller investment and attracts customers from all over the world. At the end of 2006, Vestas had installed a total of 300 V90-3.0 MW turbines worldwide”*, says Hans Jörn Rieks, President of Vestas Central Europe A/S.

Any questions in relation to the order may be addressed to Mr Hans Jörn Rieks, President of Vestas Central Europe A/S, telephone +49 4841 9710.

Yours sincerely  
**Vestas Central Europe A/S**
