Vestas strengthens its position in Castilla y León, Spain

As mentioned in Vestas Wind Systems A/S' financial report for Q2, Vestas has decided to strengthen its position in Spain, by expanding its control systems production facility in Olvega (Soria) in Castilla y León. The production facility was originally established in 2002, and with the extension, the new building will occupy approximately 30,000 square-metres, and the number of employees will increase to 140.

Furthermore, also in Castilla y León, Vestas Eólica has received an order for 9 units of the V90-1.8 MW wind turbine for the project El Coterejón, located in Merindad de Valdeporres in Burgos. The order comprises supply, installation, commissioning, VestasOnline™ Business SCADA system as well as a service contract for five years. Delivery is scheduled to start in the second quarter of 2008, and the project will be completed by the end of the year.

The order has been placed by the developer Viloría Group. Viloría Group has a total of three projects, amounting to 77 MW, installed by Vestas in Castilla y León.

"The expansion of the factory together with the order for the El Coterejón project, once again reinforce the commitment that Vestas has developed with the region of Castilla y León. Vestas has already installed 233 turbines in the region, amounting to a total of 245 MW, and another 140 MW is under construction," says Javier Rodríguez, General Manager of Vestas Eólica S.A.U., and adds: "In addition to the control systems factory, Vestas also operates a nacelles production facility in Villadangos del Páramo in Castilla y León. In these two factories alone, Vestas currently employs more than 230 employees."

Vestas Eólica S.A.U.

Vestas has been operating in the Spanish market since the 1980's. Located in Barcelona, Madrid and Zaragoza, Vestas Eólica S.A.U. is the Spanish company of Vestas, responsible for sales, installation, service and maintenance of wind power plants.

To ensure proximity to its clients in Spain, Vestas operates a nacelles production facility in Viveiro (Lugo) and the nacelles and controls systems production facilities mentioned above. A new blade production facility will be operational by mid 2008 in Daimiel, Castilla-la-Mancha. Furthermore, Vestas has a customer service centre in La Muela, Zaragoza, and two service and maintenance centres in Zaragoza and La Coruña. In total, Vestas employs approx 700 people in Spain.

At a global level, Vestas wind turbines produce more than 50 million MWh a year - enough electricity to power all Spanish households. In Spain, Vestas has installed more than 1,700 turbines by the end of June 2007, which amounts to more than 1,600 MW.

Vestas Eólica has been awarded ISO 9001 and OHSAS 18001 certifications and is constantly striving for high quality standard to be respected and applied.
