Vestas receives an order for V90-2.0 MW wind turbines in France

Vestas has received an order for 9 units of the V90-2.0 MW wind turbine. The project will be divided into two wind power plants to be located in the Pays de la Loire region. The contract includes supply, installation, commissioning, VestasOnline™ Business SCADA system, as well as a five-year service agreement. Delivery is scheduled to start in January 2009, and commissioning is expected in April 2009.

The order has been placed by ENEL Erelis, a French subsidiary of the Italian energy company ENEL, which is the second largest company in the wind power industry in Italy. Having had a close cooperation with ENEL in Italy during the past 10 years, Vestas will be working closely with the French subsidiary in these two projects in France.

"We are very satisfied with this new order, as it is the first time that Vestas France establishes a direct partnership in France with ENEL, which is an influential group in the wind power industry," says Nicolas Wolff, General Manager of Vestas France SAS. *"We are looking forward to collaborating with such a strong player and strengthening our position on the French market as No. 1 in Modern Energy,"* he concludes.

In 2007, 888 MW were installed in France taking the cumulative capacity to 2,471 MW¹, which makes France the fourth largest European market in wind generating capacity. Having experienced a growth rate of 56 per cent between 2006 and 2007, France is one of the most dynamic wind energy markets in Europe.

By 31 December 2007, Vestas France had 316 wind turbines installed in the French territory, representing an accumulated wind installed capacity of 487 MW.
