Vestas secures 53 MW turbine order in Finland

Finland’s EPV Tuulivoima has placed its second consecutive order with Vestas for a project in Ilmajoki in the western part of the country.

The order for the Ilmajoki Santavuori project is for 16 V126-3.3 MW turbines and includes delivery, installation and commissioning of the turbines as well as a six-year Active Output Management (AOM) 5000 service agreement. Delivery of the turbines is expected to take place in the first quarter of 2016. The project is expected to be completed in the third quarter of 2016.

“EPV Tuulivoima has been a customer with Vestas since 2013 and we are very pleased that they have chosen to work with us on their second project in a row”, says Klaus Steen Mortensen, President of Vestas Northern Europe. “Furthermore, with this order, we underline our strong position in the Finnish market – a market that is growing and strategic for Vestas in Northern Europe”, Mortensen says.

EPV Tuulivoima has previously placed one order with Vestas for the 53 MW Vähäkyrö project.

Finland plans to increase the use of renewable energy from 30 percent to 38 percent by 2020 by increasing the usage of wind energy, biomass and other renewable energy sources. A feed-in premium came into effect in 2011 in the country, a tariff designed to support the use and development of wind power. Since the feed-in premium came into effect, Vestas has received orders in Finland totaling 478 MW, including the Ilmajoki Santavuori project.

About Vestas

Every single day, Vestas wind turbines deliver clean energy that supports the global fight against climate change. Wind power from Vestas’ more than 53,700 wind turbines currently reduces carbon emissions by over 80 million tons of carbon dioxide every year, while at the same time building energy security and independence.

Vestas has delivered wind energy in 73 countries, providing jobs for around 19,700 passionate people at our service and project sites, research facilities, factories and offices all over the world. With 52 percent more megawatts installed than our closest competitor and more than 66 GW of cumulative installed capacity worldwide, Vestas is the world leader in wind energy.
