Vestas receives 23 MW turbine order in Finland

Vestas has secured a 23 MW order in Finland, the first order in the country to feature the Vestas De-icing System on the V126 turbine.

The order for seven V126-3.3 MW turbines has been placed by E-Group for the Posio I project in Posio, Lapland and Kuusamo, Northern Ostrobothnia. Turbine delivery is expected to begin in the second quarter of 2016.

The contract includes delivery, installation and commissioning of the turbines, a 10-year Active Output Management (AOM) 5000 service agreement, VestasOnline® Business SCADA solution and the Vestas De-icing System. The De-icing system can help prevent ice build-up on the turbine blades by using an ice detection system and a hot air flow unit within the blades.

"The Posio I order marks the first time that we will be working on a project with E-Group and it underlines our strong position in the Finnish market", says Klaus Steen Mortensen, President of Vestas Northern Europe. "We are very pleased that E-Group has chosen to work with us on their project and that the De-icing System will be used on the V126 turbine", Mortensen says.

About Vestas

Every single day, Vestas wind turbines deliver clean energy that supports the global fight against climate change. Wind power from Vestas’ more than 53,700 wind turbines currently reduces carbon emissions by over 60 million tons of carbon dioxide every year, while at the same time building energy security and independence.

Vestas has delivered wind energy in 73 countries, providing jobs for around 19,700 passionate people at our service and project sites, research facilities, factories and offices all over the world. With 52 percent more megawatts installed than our closest competitor and more than 66 GW of cumulative installed capacity worldwide, Vestas is the world leader in wind energy.
