Vestas secures orders for 162 MW in the United States

Vestas has received two firm and unconditional orders, totaling 162 MW of V110-2.0 MW turbines for projects in the United States.

For one of the orders, some of the turbines will be delivered in the 2.2 MW power optimized mode. Vestas and the customer utilized the flexibility of the V110 power modes to customize a site-specific product mix that extracts the maximum wind resource output, reaping the optimal value between yield and cost.

Both orders include supply and commissioning of the wind turbines as well as Active Output Management (AOM) 5000 service agreements, a full-scope service package to maximize uptime and performance and energy production. Turbine delivery will begin in the third quarter of 2017.

Turbine nacelles, blades, and towers will be produced at Vestas’ Colorado factories.

“The V110-2.0 MW is our flagship turbine platform in the United States, and the versatility of site-specific power mode combinations unlocks the potential of the wind conditions and increases site output,” says Chris Brown, President of Vestas’ sales and service division in the United States and Canada.

Customer and project names have not been disclosed at the customer’s request.

About Vestas
Every single day, Vestas wind turbines deliver clean energy that supports the global fight against climate change. Wind power from Vestas’ more than 57,300 wind turbines currently reduces carbon emissions by over 82 million tons of carbon dioxide every year, while at the same time building energy security and independence. Vestas has delivered wind energy in 75 countries, providing jobs for around 21,500 passionate people at our service and project sites, research facilities, factories and offices all over the world. With 50 percent more megawatts installed than anyone else in the industry and over 75 GW of cumulative installed capacity worldwide, Vestas is the world leader in wind energy.
