Vestas receives 53 MW order in Uruguay

Vestas will supply 16 units of the V126-3.3 MW turbine for the Vientos de Pastorage wind farm in Uruguay. This will be Cobra's second project with Vestas in the country.

Vestas has received a firm and unconditional order for a 53 MW wind power project to be located in Villa Pastora, in the southwestern province of Flores, Uruguay. The order for 16 V126-3.3 MW wind turbines was placed by TaxWay S.A., the Uruguayan subsidiary of the Spain-based Cobra group, a leading company specialising in developing industrial infrastructure worldwide.

The order comprises supply, installation and commissioning of the wind turbines as well as a 10-year Active Output Management (AOM) 4000 service agreement, a full-scope service package to maximise uptime and performance. Turbine delivery is scheduled for the third quarter of 2016, whilst commissioning is expected for the first quarter of 2017.

The Vientos de Pastorage wind power plant will have an estimated annual production of 223 GWh, enough to cover the electricity consumption of approximately 50,000 Uruguayan households with clean energy annually. The V126-3.3 MW wind turbine allows for higher energy capture in areas with low-to-medium wind, producing more energy at a reduced cost.

"With 344 MW already installed and around 170 MW under construction, Vestas leads Uruguay's wind energy industry with approximately 35 percent market share. Vientos de Pastorage will be the second project that Vestas signs with Cobra and we look forward to putting our expertise and cutting-edge technologies at the disposal of such a valued partner", says Marco Graziano, President of Vestas Mediterranean.

In 2015, Vestas announced 120 MW of new orders in Uruguay. With the 53 MW project announced today, Vestas takes a step further in consolidating its market leading position in the country, which aims to produce 38 percent of its electricity needs from wind power by 2017.

About Vestas

Every single day, Vestas wind turbines deliver clean energy that supports the global fight against climate change. Wind power from Vestas' more than 56,800 wind turbines currently reduces carbon emissions by over 75 million tons of carbon dioxide every year, while at the same time building energy security and independence. Vestas has delivered wind energy in 75 countries, providing jobs for

around 20,500 passionate people at our service and project sites, research facilities, factories and offices all over the world. With 52 percent more megawatts installed than anyone else in the industry and nearly 74 GW of cumulative installed capacity worldwide, Vestas is the world leader in wind energy.
