

News release from Vestas Mediterranean

Madrid, 04 April 2016

Vestas receives 172 MW of orders in Brazil

The orders are the first Vestas has announced in Brazil in 2016 and consist of six wind farms

Vestas will supply 86 units of V110-2.0 MW turbines for projects totalling 172 MW located in the state of Bahía in northeastern Brazil. The contracts comprise supply and installation of the wind turbines in compliance with the local content requirements set by the BNDES. Turbine delivery is planned for the second quarter of 2017, whilst commissioning is expected in the fourth quarter of 2017.

Marco Graziano, President of Vestas Mediterranean says that “Today’s orders cover six different sites across Bahía and is a great example of how well-suited the V110-2.0 MW is for Brazil, its wind conditions and geographical span. Brazil was Vestas’ fifth largest market for order intake in 2015, and we have a strategic ambition to grow further there. With our increased presence, order intake and BNDES-accreditation, we are on the right track”.

Vestas has been present in Brazil since 2000 and announced 376 MW in firm orders in 2015. In addition to the sales office in Sao Paulo, Vestas has recently inaugurated a hub and nacelle production facility in Aquiraz (Ceará) as well established a successful partnership for producing blades and generators locally.

About Vestas

Every single day, Vestas wind turbines deliver clean energy that supports the global fight against climate change. Wind power from Vestas’ more than 56,800 wind turbines currently reduces carbon emissions by over 75 million tons of carbon dioxide every year, while at the same time building energy security and independence. Vestas has delivered wind energy in 75 countries, providing jobs for around 20,500 passionate people at our service and project sites, research facilities, factories and offices all over the world. With 52 percent more megawatts installed than anyone else in the industry and nearly 74 GW of cumulative installed capacity worldwide, Vestas is the world leader in wind energy.
