Vestas to supply and install 48 MW wind park in the Dominican Republic

Vestas has received an engineering, procurement and construction (EPC) order for the 48 MW Guzmancitos wind park to be located in the Puerto Plata region, in the Dominican Republic. The EPC contract includes the supply and installation of 16 V136-3.45 MW turbines delivered in 3.0 MW Load Optimised Mode.

The firm and unconditional order was placed by RGE, and, additionally to the wind turbines, it also includes a 10-year Active Output Management 5000 (AOM5000) service agreement.

The project is the fifth that Vestas installs in the country, providing the Dominican Republic almost 180 MW capacity of installed and under construction.

“The Dominican Republic is bidding for renewable energy sources to fulfil its energy consumption which is growing rapidly. Vestas pioneered the country’s wind energy market back in 2011 and, and with this order we reinforce our leading position in the country”, says Enric Català, Vestas Senior Director Sales LATAM.

Turbine delivery is planned for the first quarter of 2019, whilst commissioning is expected for the third quarter of the same year.

About Vestas

Vestas is the energy industry’s global partner on sustainable energy solutions. We design, manufacture, install, and service wind turbines across the globe, and with 92 GW of wind turbines in 79 countries, we have installed more wind power than anyone else. Through our industry-leading smart data capabilities and unparalleled 78 GW of wind turbines under service, we use data to interpret, forecast, and exploit wind resources and deliver best-in-class wind power solutions. Together with our customers, Vestas’ more than 23,900 employees are bringing the world sustainable energy solutions to power a bright future.
